

Operators and Integers

Look at this code:

```
num1 = 12
num2 = int(input("Enter a whole number: "))

total = num1 + num2

print("Total:", total)
```

Use the code above to help you. After completing each challenge below, run your program to test that it works correctly. Save each completed challenge program in a new file.

Programming Challenges

Challenge 1

Ask for two whole numbers, convert both with `int()`, and display their sum.

Challenge 2

Store 2 as a non-zero secret number, divide the user's sum by it, and display the new total.

Challenge 3

Create a program that asks for three whole numbers, subtracts the second and third from the first, and displays the total.
