

Nested Decisions

Look at this code:

```
raining = input("Is it raining? yes/no: ")
if raining == "yes":
    windy = input("Is it windy? yes/no: ")
    if windy == "yes":
        print("Wear a coat.")
    else:
        print("Take an umbrella.")
else:
    print("No rain gear needed.")
```

Use the code above to help you. After completing each challenge below, run your program to test that it works correctly. Save each completed challenge program in a new file.

Programming Challenges

Challenge 1

When it is raining, ask whether the wind is "strong" or light. Display "Wear a coat." for "strong" wind and "Take an umbrella." for light wind. Keep the dry-weather route unchanged.

Challenge 2

Extend the dry-weather route. If raining is no, ask whether it is sunny; display "Take sunglasses." for "yes" and "No weather gear needed." for no.

Challenge 3

Build a library-access checker. Ask whether the visitor has a card. Only card holders are asked whether a book is overdue. Display one clear message for all three possible routes.
