

Random Whole Numbers

Look at this code:

```
import random

roll = random.randint(1, 6)

print("Dice roll:", roll)
```

Use the code above to help you. After completing each challenge below, run your program to test that it works correctly. Save each completed challenge program in a new file.

Programming Challenges

Challenge 1

Change the die so it can roll numbers from 1 to 12. Run the program several times; every result should be between 1 and 12.

Challenge 2

Generate two six-sided rolls. Display both rolls and their total.

Challenge 3

Create a random practice target. Ask for a minimum and maximum whole number, generate one target inside those inclusive bounds, and display it with a label. Test bounds 4 and 4; the target must be 4.
