

Random Steps and Choices

Look at this code:

```
import random

even_step = random.randrange(2, 13, 2)
colour = random.choice(["red", "blue", "gold"])
print("Move:", even_step)
```

Use the code above to help you. After completing each challenge below, run your program to test that it works correctly. Save each completed challenge program in a new file.

Programming Challenges

Challenge 1

Generate and display a random multiple of 5 from 5 to 30. Run the program several times; every result should be a multiple of 5 in this range.

Challenge 2

Add "green" to the colour choices and generate two independently stored colour selections. Display both selections on labelled lines.

Challenge 3

Build a random training prompt. Choose an even repetition count from 2 through 12 and one activity from a three-item list you design. Display one instruction such as 8 "jumps".
