

Inserting and Removing List Items

Look at this code:

```
kit = ["coat", "water", "torch"]
kit.insert(1, "map")

kit.remove("coat")

print("Packed kit:", kit)
```

Use the code above to help you. After completing each challenge below, run your program to test that it works correctly. Save each completed challenge program in a new file.

Programming Challenges

Challenge 1

Insert "snack" at position 2 and keep the removal of "coat". The final order must be "water", "snack", "torch".

Challenge 2

Ask for an item to insert at position 1, then ask for an existing item to remove. Display the list after each operation. Test "map" then "coat".

Challenge 3

Create a four-name running order editor. Insert a reserve at a user-chosen valid position, remove one known existing name by value, and display the final order one name per line using a for loop.
