

Changing 2D List Rows

Look at this code:

```
clubs = [{"Art", 12}, {"Chess", 18}]
new_club = ["Code", 15]
clubs.append(new_club)
clubs.insert(1, ["Music", 9])
del clubs[0]
for club in clubs:
    print(club[0], club[1])
```

Use the code above to help you. After completing each challenge below, run your program to test that it works correctly. Save each completed challenge program in a new file.

Programming Challenges

Challenge 1

Insert ["Drama", 11] at row position 0 and remove the deletion line. The final output must begin "Drama" 11.

Challenge 2

Ask for a new club name and member count, build a two-field row, append it, then ask for one valid row position to delete. Display the remaining rows.

Challenge 3

Build an event schedule editor with three [event, room] rows. Insert one user-created row at a valid position, delete a different valid row from the enlarged schedule, and display numbered remaining rows using a counter.
