

# Decisions

Look at this code:

```
choice = input("Choose walk or read: ")
if choice == "walk":

    print("Take a walk in the park.")
else:
    print("Read a book at home.")
```

Use the code above to help you. After completing each challenge below, run your program to test that it works correctly. Save each completed challenge program in a new file.

## Programming Challenges

### Challenge 1

Replace the walk route with a cycle route. Update the prompt, the if comparison and its message so "cycle" displays "Ride a bike in the park." Keep the else route unchanged. Test "cycle" and "read".

### Challenge 2

Personalise both routes: ask for the user's name, then include it in whichever recommendation appears. Check that the name is shown for both possible choices.

### Challenge 3

A cafe asks, "Do you want tea?" Use if and else to build a two-way choice: yes displays "Tea is ready."; every other answer displays "Choose another drink." Test one input for each route.
