

Strings and Text

Look at this code:

```
name = input("What is your first name? ")
name = name.strip()

name = name.title()

print("Hello,", name, "!")
```

Use the code above to help you. After completing each challenge below, run your program to test that it works correctly. Save each completed challenge program in a new file.

Programming Challenges

Challenge 1

Store the cleaned name in a new variable called `clean_name`. Use `strip()` and `title()` together, then display `clean_name`. Input " aLEX " must display the cleaned name as Alex.

Challenge 2

A name badge needs a first name and surname. Extend the program so both answers are cleaned with `strip()` and `title()`, then display the finished full name.

Challenge 3

Choose a place you would like to visit. Build a destination label from a city and country, cleaning both answers before you display "Destination: [city] - [country]".
