

Joining Text

Look at this code:

```
first_name = input("First name: ")
last_name = input("Last name: ")

username = first_name.lower() + "." + last_name.lower()

print("Username:", username)
```

Use the code above to help you. After completing each challenge below, run your program to test that it works correctly. Save each completed challenge program in a new file.

Programming Challenges

Challenge 1

Use an underscore instead of a full stop. Asha and Khan should produce `asha_khan`.

Challenge 2

Add a department input. Build `account_label` from lower-case last name, a hyphen and upper-case department. Khan and art should display `khan-ART`.

Challenge 3

Create an event tag from a venue, an activity and a two-letter group. The visible tag must use the structure `venue/activity-GROUP` with the venue and activity in lower case.
