

Reliable Menus

Look at this code:

```
running = True
while running == True:
    choice = input("1: greet, 2: leave: ")
    choice = choice.lower()
    if choice == "1":
        print("Hello!")
    elif choice == "2":
        running = False
    else:
        print("Choose 1 or 2.")
print("Menu closed.")
```

Use the code above to help you. After completing each challenge below, run your program to test that it works correctly. Save each completed challenge program in a new file.

Programming Challenges

Challenge 1

Change the exit route from 2 to 0. Update the menu prompt and the `elif` comparison. Route 1 and invalid input must keep their existing behaviour. Test route 1, the invalid input x, and exit route 0.

Challenge 2

Add route 3 to display "Help: choose a number." Update the prompt and invalid guidance. Test the path 3, x, 2.

Challenge 3

Build a repeating transport menu with two useful routes, one exit route and one invalid-input message. At least one useful route must ask a follow-up question and display a labelled response.
