

Character Codes

Look at this code:

```
letter = input("One lower-case letter a-y: ")
code = ord(letter)

next_letter = chr(code + 1)
print("Character code:", code)
print("Next letter:", next_letter)
```

Use the code above to help you. After completing each challenge below, run your program to test that it works correctly. Save each completed challenge program in a new file.

Programming Challenges

Challenge 1

Display the previous letter by subtracting 1 from the character code. Change the input range to one lower-case letter from b to z. Input d must display c.

Challenge 2

Ask for one lower-case letter a-w and a shift from 1 to 3. Add the shift to the character code and display the encoded letter. For c and 2, display e.

Challenge 3

Create a three-character encoder without a loop. Ask for three lower-case letters a-y, move each code forward by 1, concatenate the three encoded characters, and display the encoded text.
