

List Positions and Updates

Look at this code:

```
supplies = ["pencil", "book", "tape"]
position = int(input("Position 0 to 2: "))
print("Old item:", supplies[position])
replacement = input("Replacement item: ")
supplies[position] = replacement
print("Updated list:", supplies)
```

Use the code above to help you. After completing each challenge below, run your program to test that it works correctly. Save each completed challenge program in a new file.

Programming Challenges

Challenge 1

Replace the item at position 2 with scissors. The final `list` must display pencil, book and scissors in that order.

Challenge 2

After the replacement, ask for a second valid position and display the item currently stored there. For 1/folder then 1, the selected item must be folder.

Challenge 3

Build a three-stop route editor. Start with three place names, ask which valid position to change and the new place, then display the first stop and the complete updated route.
