

Logical Choices

Look at this code:

```
age = int(input("Enter your age: "))
has_ticket = input("Do you have a ticket? ")
has_adult = input("Is an adult with you? ")
if age >= 12 and (has_ticket == "yes" or has_adult == "yes"):
    print("You may enter.")
else:
    print("Please check the entry rules.")
```

Use the code above to help you. After completing each challenge below, run your program to test that it works correctly. Save each completed challenge program in a new file.

Programming Challenges

Challenge 1

Change the age check from 12 to 14. Test ages 13 and 14 with a ticket.

Challenge 2

Change the `if` condition. Use the `and` operator to allow entry when `[age]` is at least 12 and `[has_ticket]` is "yes". Use the `or` operator to also allow entry when `[has_adult]` is "yes". Otherwise, display "Please check the entry rules." Test age 10 with "no" for the ticket and "yes" for the adult; display "You may enter."

Challenge 3

Ask whether the visitor is a member and store the answer in `[member]`. Ask whether the visitor has a valid pass and store the answer in `[valid_pass]`. Use the `and` operator in the `if` condition so "Club entry allowed." is displayed only when both answers are "yes"; otherwise display "Club entry refused." Test "yes" and "yes", then test "yes" and "no".
