

Condition Loops

Look at this code:

```
target = 7
attempts = 0
guess = 0
while guess != target and attempts < 3:
    guess = int(input("Guess 1 to 10: "))
    attempts = attempts + 1
print("Finished in", attempts, "tries.")
```

Use the code above to help you. After completing each challenge below, run your program to test that it works correctly. Save each completed challenge program in a new file.

Programming Challenges

Challenge 1

Change the maximum number of attempts from 3 to 2. Change the final output to display "Attempts used:" followed by [attempts]. Test "7"; display "Attempts used: 1". Test "4" and "5"; display "Attempts used: 2".

Challenge 2

Give the player five attempts. Update the finishing message to report the guesses used. Test an early correct guess and five unsuccessful guesses; both counts must be accurate.

Challenge 3

Store "open" in [password]. Use a while loop to ask for a door code until the user enters "open" or [attempts] reaches 3. Add 1 to [attempts] after each answer. Test "open"; display "Door opened. Attempts used: 1". Test "red", "blue" and "green"; display "Door locked. Attempts used: 3".
