

Strings and Text

Look at this code:

```
name = input("What is your first name? ")
name = name.strip()

name = name.title()

print("Hello,", name)
```

Use the code above to help you. After completing each challenge below, run your program to test that it works correctly. Save each completed challenge program in a new file.

Programming Challenges

Challenge 1

Use `strip()` and `title()` on `[name]`, then store the result in a new variable called `[clean_name]`. Display `[clean_name]`. The input " aLEX " must display "Hello, Alex".

Challenge 2

Ask for a first name and store it in `[name]`. Ask for a surname and store it in `[surname]`. Apply `strip()` and `title()` to both variables, then display the full name. Test " aLEX " and " nGUYEN "; display "Hello, Alex Nguyen".

Challenge 3

Ask for a city, country and landmark and store the answers in `[city]`, `[country]` and `[landmark]`. Apply `strip()` and `title()` to all three variables. Display the city and country on a line beginning "Destination:". Display the landmark on a second line beginning "Visit:". Test " hANOI ", " vIETNAM " and " hOAN KIEM LAKE "; display "Destination: Hanoi - Vietnam" and "Visit: Hoan Kiem Lake".
