

String Positions

Look at this code:

```
word = input("Enter a word: ")
first = word[0]

preview = word[0:3]

print("Initial:", first, "Preview:", preview)
```

Use the code above to help you. After completing each challenge below, run your program to test that it works correctly. Save each completed challenge program in a new file.

Programming Challenges

Challenge 1

Change the slice's stop position so the preview contains four characters instead of three. Try "code" and "python"; both previews should contain four characters.

Challenge 2

Ask for two words and store them in [first_word] and [second_word]. Use position 0 to display the first character of each word. Test "Code" and "python"; display "Initials: C p".

Challenge 3

Ask for a six-letter word and store it in [word]. Store the slice from positions 0 to 2 in [first_part] and the slice from positions 4 to 6 in [last_part]. Display "Reference:" followed by both parts. Test "python"; display "Reference: py on".
