

Joining Text

Look at this code:

```
first_name = input("First name: ")
last_name = input("Last name: ")

username = first_name.lower() + "." + last_name.lower()

print("Username:", username)
```

Use the code above to help you. After completing each challenge below, run your program to test that it works correctly. Save each completed challenge program in a new file.

Programming Challenges

Challenge 1

Change the full stop between [first_name] and [last_name] to an underscore. Test "Asha" and "Khan"; display "Username: asha_khan".

Challenge 2

Ask for a last name and store it in [last_name]. Ask for a department code and store it in [department]. Join the lower-case last name, a hyphen and the upper-case department, then store the result in [account_label]. Test "Khan" and "art"; display "Account label: khan-ART".

Challenge 3

Ask for a venue, an activity and a two-letter group, then store the answers in [venue], [activity] and [group]. Join the lower-case venue, a forward slash, the lower-case activity, a hyphen and the upper-case group. Store the result in [tag]. Test "Hall", "Quiz" and "b2"; display "Event tag: hall/quiz-B2".
