

Lists

Look at this code:

```
item = input("Pack one item: ")
packing_list = ["water", "map"]

packing_list.append(item)

print("Packing list:", packing_list)
```

Use the code above to help you. After completing each challenge below, run your program to test that it works correctly. Save each completed challenge program in a new file.

Programming Challenges

Challenge 1

Add "snacks" as the third item in [packing_list]. Keep the input and `append()` lines so the user's item is added after it. Test the input "coat"; display "Packing list: ['water', 'map', 'snacks', 'coat']".

Challenge 2

Ask for the first item and store it in [item], then append it to [packing_list]. Ask for another item and store it in [another_item], then append that item too. Test "coat" and "torch"; display "Packing list: ['water', 'map', 'coat', 'torch']".

Challenge 3

Store "film" and "popcorn" in a list called [movie_night]. Ask for another item and store it in [item]. Append [item] to [movie_night], then display "Movie-night checklist:" followed by the list. Test "tickets"; display "Movie-night checklist: ['film', 'popcorn', 'tickets']".
