

Reliable Menus

Look at this code:

```
running = True
while running == True:
    choice = input("1: greet, 2: leave: ")
    choice = choice.lower()
    if choice == "1":
        print("Hello!")
    elif choice == "2":
        running = False
    else:
        print("Choose 1 or 2.")
print("Menu closed.")
```

Use the code above to help you. After completing each challenge below, run your program to test that it works correctly. Save each completed challenge program in a new file.

Programming Challenges

Challenge 1

Change the exit option from "2" to "0" in both the input message and the `elif` condition. Keep option "1" and the invalid-input message unchanged. Test "1", then "x", then "0"; display "Hello!", "Choose 1 or 0." and finally "Menu closed."

Challenge 2

Add "3: help" to the menu input message. Use an `elif` condition so "3" displays "Help: choose a number." Change the invalid-input message to "Choose 1, 2 or 3." Test "3", "x", then "2"; display the help message, invalid-input message, then "Menu closed."

Challenge 3

Use a `while` loop to repeat the menu "1: bus, 2: walk, 3: leave". Use `if` and `elif` conditions for the choices. For "1", ask for a bus stop in [stop] and display "Selected stop:" with [stop]. For "2", display "Walk selected." For "3", end the loop and display "Planner closed." Otherwise, display "Choose 1, 2 or 3." Test "1", "Central", "2", then "3".
