

List Positions and Updates

Look at this code:

```
supplies = ["pencil", "book", "tape"]
position = int(input("Position 0 to 2: "))
print("Old item:", supplies[position])
replacement = input("Replacement item: ")
supplies[position] = replacement
print("Updated list:", supplies)
```

Use the code above to help you. After completing each challenge below, run your program to test that it works correctly. Save each completed challenge program in a new file.

Programming Challenges

Challenge 1

Keep the starter's first position and replacement inputs. After the first update, display "New item:" followed by the item at [position]. Ask for another position from 0 to 2 and store it in [second_position]. Ask for another replacement and store it in [second_replacement], then update that item. Test position 2 with "scissors", followed by position 0 with "pen"; display "Updated list: ['pen', 'book', 'scissors']".

Challenge 2

After completing one replacement, ask for another position from 0 to 2 and store it in [check_position]. Display "Selected item:" followed by the item at [check_position]. Test replacement position 1, replacement "folder" and check position 1; display "Selected item: folder".

Challenge 3

Store "Park", "Museum" and "Station" in a list called [places]. Ask for a position from 0 to 2 and store it in [position]. Ask for a new place and store it in [new_place], then replace the item at [position]. Test position 1 and "Library"; display "First stop: Park" and "Updated places: ['Park', 'Library', 'Station']".
