

Inserting and Removing List Items

Look at this code:

```
kit = ["coat", "water", "torch"]
kit.insert(1, "map")

kit.remove("coat")

print("Packed kit:", kit)
```

Use the code above to help you. After completing each challenge below, run your program to test that it works correctly. Save each completed challenge program in a new file.

Programming Challenges

Challenge 1

Insert "snack" at position 2 and keep the removal of coat. The final order must be water, snack, torch.

Challenge 2

Ask for an item and store it in [new_item], then insert it at position 1. Display the list after the insertion. Ask for an existing item and store it in [old_item], then remove it and display the list again. Test "map" followed by "coat".

Challenge 3

Store "Ari", "Bao", "Cleo" and "Dara" in [runners]. Ask for an insertion position from 0 to 4 and store it in [position]. Ask for a reserve name and store it in [reserve], then insert it at [position]. Ask for an existing name and store it in [leaving], then remove it. Use a for loop to display each remaining name. Test position 1, reserve "Eli" and leaving name "Bao"; display Ari, Eli, Cleo and Dara on separate lines.
