

Working Through Lists

Look at this code:

```
survey = ["tea", "water", "juice"]
for drink in survey:

    print("Drink:", drink)

print("Total drinks:", len(survey))
```

Use the code above to help you. After completing each challenge below, run your program to test that it works correctly. Save each completed challenge program in a new file.

Programming Challenges

Challenge 1

Create [visited] and store 0 in it before the `for` loop. Add 1 to [visited] each time the loop displays a drink. After the loop, display "Visited:" followed by [visited], then keep the existing total from `len()`. For the starter list, display "Visited: 3" and "Total drinks: 3".

Challenge 2

Add "coffee" as the fourth item in [survey]. Keep the `for` loop so every item is displayed, then display the new result from `len()`. The last item line must be "Drink: coffee" and the final line must be "Total drinks: 4".

Challenge 3

Store "blue", "green" and "red" in [colours]. Use a `for` loop and [colour] to display each value after the label "Colour:". After the loop, display "Number of answers:" followed by `len(colours)`. The final line must be "Number of answers: 3".
