

Building Lists with Loops

Look at this code:

```
notes = []
for count in range(3):
    note = input("Enter a note: ")
    notes.append(note)
print("Saved notes:")
for note in notes:
    print(note)
```

Use the code above to help you. After completing each challenge below, run your program to test that it works correctly. Save each completed challenge program in a new file.

Programming Challenges

Challenge 1

Change `range(3)` to `range(5)` so the program asks for five notes. Append each answer to `[notes]`. Test "one", "two", "three", "four" and "five"; display the five notes in that order beneath "Saved notes:".

Challenge 2

Using the example code, replace the `for` loop that asks for notes with a `while` loop. Keep asking for a note until the user enters "stop". Append each earlier answer to `[notes]`, but do not append or display "stop". Test "alpha", "beta" and "stop"; display only "alpha" and "beta" beneath "Saved notes:".

Challenge 3

Create an empty `list` called `[roster]`. Ask how many names will be entered and store the whole number in `[team_size]`. Use a `for` loop and `range(team_size)` to ask for each name and append it to `[roster]`. Ask for a replacement position from 0 to `team_size - 1` and store it in `[position]`. Ask for a replacement name and store it in `[replacement]`, then update `[roster][position]`. Test 3 names—"Ari", "Bao" and "Cleo"—then replace position 1 with "Dara". Display Ari, Dara and Cleo beneath "Final roster:".
