

Functions

Look at this code:

```
def show_greeting():  
    print("Hello, Python learner!")  
  
show_greeting()  
  
print("Welcome to Python.")
```

Use the code above to help you. After completing each challenge below, run your program to test that it works correctly. Save each completed challenge program in a new file.

Programming Challenges

Challenge 1

Rename `show_greeting()` to `show_welcome()` and update the function call. The two original messages must still appear in the same order.

Challenge 2

A greeting is useful more than once. Call `show_greeting()` a second time so "Hello, Python learner!" appears twice. Keep the final "Welcome to Python." message. Predict the number of greetings before you run the program.

Challenge 3

Build one no-input function called `show_tip()` that displays a Python tip of your choice. Call it twice; the same tip should appear two times.
