

Logical Choices

Look at this code:

```
age = int(input("Enter your age: "))
has_ticket = input("Do you have a ticket? ")
has_adult = input("Is an adult with you? ")
if age >= 12 and (has_ticket == "yes" or has_adult == "yes"):
    print("You may enter.")
else:
    print("Please check the entry rules.")
```

Use the code above to help you. After completing each challenge below, run your program to test that it works correctly. Save each completed challenge program in a new file.

Programming Challenges

Challenge 1

Change the example so visitors must also be 17 or under. Add this rule with the `and` operator and `<=`. For example, age 14 with a ticket displays "You may enter." but age 18 with a ticket does not.

Challenge 2

Change the entry rule in the example: visitors aged 12 or over need a ticket, but anyone with an adult may enter at any age. Rewrite the condition using the `and` operator and the `or` operator. For example, age 10, no ticket and an adult displays "You may enter."

Challenge 3

Create a cinema-ticket program that asks for the user's age and whether they are a student. Display "Discount price" for anyone under 16, or for students aged 25 or under; otherwise display "Full price". Use the `and` operator and the `or` operator. Test 12 and "no", 20 and "yes", then 30 and "yes".
