

Strings and Text

Look at this code:

```
name = input("What is your first name? ")
name = name.strip()

name = name.title()

print("Hello,", name)
```

Use the code above to help you. After completing each challenge below, run your program to test that it works correctly. Save each completed challenge program in a new file.

Programming Challenges

Challenge 1

Change the example so it keeps the name exactly as typed in `name` and stores the result of `strip()` and `title()` in `clean_name`. Display "You typed:" followed by `name`, then "Hello," followed by `clean_name`. For example, "aLEX" displays "You typed: aLEX" and "Hello, Alex".

Challenge 2

Extend the example so it also asks for a surname in `surname`. Use `strip()` and `title()` on the surname too, then display "Hello," followed by both names. For example, " aLEX " and " nGUYEN " display "Hello, Alex Nguyen".

Challenge 3

Create a destination program that asks for a city, a country and a landmark. Use `strip()` and `title()` on each answer. Display "Destination:" with the city and country separated by "-", then "Visit:" with the landmark. For example, " hANOI " and " vIETNAM " give "Destination: Hanoi - Vietnam".
