

Lists

Look at this code:

```
item = input("Pack one item: ")
packing_list = ["water", "map"]

packing_list.append(item)

print("Packing list:", packing_list)
```

Use the code above to help you. After completing each challenge below, run your program to test that it works correctly. Save each completed challenge program in a new file.

Programming Challenges

Challenge 1

Change the example so it also asks whether the trip is overnight. If the answer is "yes", use `append()` to add "sleeping bag" to `packing_list` before it is displayed. For example, "coat" and "yes" display "Packing list: ['water', 'map', 'coat', 'sleeping bag']".

Challenge 2

Extend the example so it asks for a second item in `another_item` and uses `append()` to add it too. For example, "coat" and "torch" display "Packing list: ['water', 'map', 'coat', 'torch']".

Challenge 3

Create a guest-list program. Start with an empty list called `guests`. Ask for three names and append each one. Then ask whether a plus-one is coming; if the answer is "yes", append "Plus one". Display the list after "Guests:".
