

Inserting and Removing List Items

Look at this code:

```
kit = ["coat", "water", "torch"]
kit.insert(1, "map")

kit.remove("coat")

print("Packed kit:", kit)
```

Use the code above to help you. After completing each challenge below, run your program to test that it works correctly. Save each completed challenge program in a new file.

Programming Challenges

Challenge 1

Change the example so the torch is moved to the front after packing. Use `remove()` to take out `"torch"`, then `insert()` to put it at position 0. The final line should be `"Packed kit: ['torch', 'map', 'water']"`.

Challenge 2

Change the example so the user chooses both changes. Ask for `new_item` and insert it at position 1, then display the `list`. Ask for `old_item` from the `list`, remove it and display the `list` again. For example, `"map"` then `"coat"` ends with `['map', 'water', 'torch']`.

Challenge 3

Create a `list` called `runners` holding `"Ari"`, `"Bao"`, `"Cleo"` and `"Dara"`. Ask for a position and a reserve runner to insert there, then ask for a runner to remove. Display the `list` after `"Runners:"`. For example, 1, `"Eli"` and `"Bao"` display `"Runners: ['Ari', 'Eli', 'Cleo', 'Dara']"`.
