

Functions

Look at this code:

```
def show_greeting():  
    print("Hello, Python learner!")  
  
show_greeting()  
  
print("Welcome to Python.")
```

Use the code above to help you. After completing each challenge below, run your program to test that it works correctly. Save each completed challenge program in a new file.

Programming Challenges

Challenge 1

Change the example by adding a second function called `show_rules()` that displays "Save your work often." and "Ask for help when stuck." Call `show_rules()` after `show_greeting()` and before the final message.

Challenge 2

Extend the example with a function called `show_line()` that displays a line of dashes. Call `show_line()` before and after `show_greeting()` so the greeting appears inside a banner.

Challenge 3

Create a program with two functions: `show_intro()` displays a welcome message and `show_goodbye()` displays a farewell. In the main program, call `show_intro()`, ask for the user's name, display "Nice to meet you," followed by the name, then call `show_goodbye()`.
