

Decimal Numbers

Look at this code:

```
distance = float(input("Enter kilometres: "))
minutes = float(input("Enter minutes: "))

speed = distance / minutes

print("Kilometres per minute:", speed)
```

Use the code above to help you. After completing each challenge below, run your program to test that it works correctly. Save each completed challenge program in a new file.

Programming Challenges

Challenge 1

Change the sample journey to 9 kilometres in 3 minutes. The labelled result should be 3.0 kilometres per minute.

Challenge 2

Add a third decimal input called `rest_minutes`. Display `total_minutes` as travel minutes plus rest minutes. For 12.5 and 2.5, the total must be 15.0.

Challenge 3

Create a floor-area calculator. Ask for decimal length and width, multiply them, and display a labelled area. Test 4.5 by 2: the area should be 9.0.
