

Logical Choices

Look at this code:

```
age = int(input("Enter your age: "))
has_ticket = input("Do you have a ticket? ")
has_adult = input("Is an adult with you? ")
if age >= 12 and (has_ticket == "yes" or has_adult == "yes"):
    print("You may enter.")
else:
    print("Please check the entry rules.")
```

Use the code above to help you. After completing each challenge below, run your program to test that it works correctly. Save each completed challenge program in a new file.

Programming Challenges

Challenge 1

Lower the age boundary to 14. Use the existing ticket rule, then test ages 13 and 14 with a ticket so the change is visible.

Challenge 2

Add an adult exception with or: entry is allowed when the age-and-ticket rule is true or an adult is present. Test an under-age visitor with no ticket but with an adult.

Challenge 3

Build a club checker that asks whether the visitor is a member and has a valid pass. Use and so entry is allowed only when both answers are "yes"; otherwise show a refusal. Test one allowed and one refused route.
