

# Strings and Text

Look at this code:

```
name = input("What is your first name? ")
name = name.strip()

name = name.title()

print("Hello,", name, "!")
```

Use the code above to help you. After completing each challenge below, run your program to test that it works correctly. Save each completed challenge program in a new file.

## Programming Challenges

### Challenge 1

Make the greeting begin with "Welcome," and show the cleaned name. Try it with spaces and uneven capital letters in the input.

### Challenge 2

A name badge needs a first name and surname. Extend the program so both answers are cleaned with `strip()` and `title()`, then display the finished full name.

### Challenge 3

Choose a place you would like to visit. Build a destination label from a city and country, cleaning both answers before you display "Destination: [city] - [country]".
