

Text Length and Lines

Look at this code:

```
message = input("Short message: ")
character_count = len(message)

print("Message:\n" + message)

print("Characters:", character_count)
```

Use the code above to help you. After completing each challenge below, run your program to test that it works correctly. Save each completed challenge program in a new file.

Programming Challenges

Challenge 1

Change the heading to "Notice:" while keeping the message on the following line. Code now must still report 8 characters.

Challenge 2

Collect a title and a subtitle. Display both on separate lines, then display a labelled character count for each one.

Challenge 3

Create a two-line poster checker. Ask for a heading and one instruction, display the poster on two lines, and report the combined character count using the two `len()` results.
