

Random Whole Numbers

Look at this code:

```
import random
random.seed(7)

roll = random.randint(1, 6)

print("Dice roll:", roll)
```

Use the code above to help you. After completing each challenge below, run your program to test that it works correctly. Save each completed challenge program in a new file.

Programming Challenges

Challenge 1

Turn the die into a twelve-sided die. Keep seed 7; the displayed result must stay between 1 and 12 inclusive.

Challenge 2

Generate two six-sided rolls and display their total. With seed 7, the two stored rolls must be generated on separate lines.

Challenge 3

Create a random practice target. Ask for a minimum and maximum whole number, generate one target inside those inclusive bounds, and display it with a label. Test bounds 4 and 4; the target must be 4.
