

Building Lists with Loops

Look at this code:

```
notes = []
for count in range(3):
    note = input("Enter a note: ")
    notes.append(note)
print("Saved notes:")
for note in notes:
    print(note)
```

Use the code above to help you. After completing each challenge below, run your program to test that it works correctly. Save each completed challenge program in a new file.

Programming Challenges

Challenge 1

Collect exactly five notes instead of three. The program must display all five in their original input order.

Challenge 2

Replace the fixed input loop with a condition-controlled loop. Keep asking for a note until stop is entered; do not append or display the sentinel stop.

Challenge 3

Create a team roster builder. Ask how many names will be entered, collect exactly that many names into an empty list, then ask for one valid replacement position and update that name before displaying the final roster one name per line.
