

Functions

Look at this code:

```
def show_greeting():  
    print("Hello, Python learner!")  
  
show_greeting()  
  
print("Welcome to Python.")
```

Use the code above to help you. After completing each challenge below, run your program to test that it works correctly. Save each completed challenge program in a new file.

Programming Challenges

Challenge 1

Rewrite only the message inside `show_greeting()` so a caller sees "Hello, coder!" The function name and call stay unchanged.

Challenge 2

A greeting is useful more than once. Add a second function call: call `show_greeting()` again so "Hello, Python learner!" appears twice. Predict the number of greetings before you run it.

Challenge 3

Build one no-input function called `show_tip()` that displays a Python tip of your choice. Call it twice; the same tip should appear two times.
