

Reliable Menus

Look at this code:

```
running = True
while running == True:
    choice = input("1: greet, 2: leave: ")
    choice = choice.lower()
    if choice == "1":
        print("Hello!")
    elif choice == "2":
        running = False
    else:
        print("Choose 1 or 2.")
print("Menu closed.")
```

Use the code above to help you. After completing each challenge below, run your program to test that it works correctly. Save each completed challenge program in a new file.

Programming Challenges

Challenge 1

Change the example so it counts how many times the user chooses "1". Store 0 in `greetings` before the loop and add 1 each time "Hello!" is displayed. After the loop, display "Greetings:" followed by `greetings`. For example, "1", "1" and "2" display "Greetings: 2".

Challenge 2

Extend the example menu with "3: help". Add an `elif` condition that displays "Help: choose a number." and change the invalid-input message to "Choose 1, 2 or 3." For example, "3", "x" and "2" show the help message, the invalid message, then "Menu closed."

Challenge 3

Create a travel-planner menu with "1: bus, 2: walk, 3: leave". Use a `while` loop with a `Boolean` flag, and if, `elif` and `else` for the choices. For "1", ask for a bus stop and display it after "Selected stop:". For "2", display "Walk selected.". For "3", stop and display "Planner closed.". Otherwise display "Choose 1, 2 or 3."
