

More Decisions

Look at this code:

```
score = int(input("Enter a score from 0 to 10: "))
if score >= 8:
    print("Excellent")
elif score >= 5:
    print("Good")
else:
    print("Keep practising")
```

Use the code above to help you. After completing each challenge below, run your program to test that it works correctly. Save each completed challenge program in a new file.

Programming Challenges

Challenge 1

Change the example so both comparisons use `>` instead of `>=`. Choose new numbers so every score still gets the same message as before. Test 8 and 5; they should still display "Excellent" and "Good".

Challenge 2

Extend the example with another `elif` condition so scores 3 and 4 display "Keep practising". Change the `else` message to "Try again". For example, 4 displays "Keep practising" and 2 displays "Try again".

Challenge 3

Create a program that asks for a whole-number temperature. Use `if`, `elif` and `else` to display "Hot" for 30 or above, "Warm" for 20 to 29, "Freezing" below 0 and "Cool" for anything else. Test 30, 20, 5 and -3.
