

Building Lists with Loops

Look at this code:

```
notes = []
for count in range(3):
    note = input("Enter a note: ")
    notes.append(note)
print("Saved notes:")
for note in notes:
    print(note)
```

Use the code above to help you. After completing each challenge below, run your program to test that it works correctly. Save each completed challenge program in a new file.

Programming Challenges

Challenge 1

Change the example's output so each saved note is numbered from 1. Store 1 in `number` before the second `for` loop, display `number` and the note, then add 1. For example, if the first note is "milk", display "1 milk".

Challenge 2

Change the example so a `while` loop replaces the first `for` loop and collects notes until the user enters "stop".

Append every other answer to `notes`, then display the saved notes as before. For example, "alpha", "beta" and "stop" display only "alpha" and "beta".

Challenge 3

Create a team roster. Start with an empty `list` called `roster`, ask how many names to enter, and use a `for` loop and `range()` to append that many names. Ask for a position and a replacement name, update that item, then display each name on its own line after "Final roster:".
